Fantuzzi Parts

The Fantuzzi Group of Companies offers an over abundance of material handling equipment and heavy machinery. The fleet consists of a plethora of machines focused on loading, unloading and transporting goods. The railway freight industry and the port market utilize a big portion of their equipment.

Initially beginning in the 1960s as a zoo-technical and agricultural equipment manufacturer in the province of Reggio Emilia, Fantuzzi has expanded to become a global leader in the heavy equipment industry. Now a global firm, the company gradually expanded after introducing successful advancements and overcoming a large number of technological challenges. Luciano Fantuzzi is the President and founder of the group. In 1967, the group began making side lift trucks specifically for hauling timber and extended materials such as metal rods that weighed between 3 to five tonnes. The business enjoyed frequent orders and completed 60 units in the 2nd; approximately 5 times greater than their first year sales.

Within a short amount of time, the business took off exponentially. In 1968, a heavy-duty side-loader British model that was capable of lifting up to 32 tonnes inspired Luciano Fantuzzi. He wanted to create something that had more power with a similar style. After finishing this machine and reaching his goal, Luciano began accepting orders from French Railways, Fiat and many others. Nowadays, the Fantuzzi Group Italy has a large number of manufacturing plants around the globe including Italy, Germany and China. The firm proudly exports to 162 countries.

Fantuzzi has kindly provided its patented knowledge with countries all over the globe with the goal of making the material handling, heavy equipment and transportation industries more efficient. Advancements and digital technology are helping to transform the industry.
