

## **Aerial Lift Train the Trainer Barrie**

Aerial Lift Train the Trainer Barrie - The train the trainer program intended for aerial lifts helps to teach the trainers how to safely train potential operators in an industrial situation. Trainers would be given in-depth instruction about the workings of aerial lift equipment. The program is provided on an open enrollment basis and delivered at selected training sites. Prior to certification, trainers are assessed and scored based on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the industry, we offer the best hands-on training possible through opportunities to practice concepts and techniques taught inside the classroom. Together with hands-on experience, trainers develop general understanding of instructional techniques and machinery theory, field and classroom communication skills, and ability to efficiently train and evaluate operators. Trainers will gain knowledge about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques included in communicating concepts within a classroom and/or field situation. Knowledge needs a training part to be effective in workplace situations. There are three factors of equipment operation that the trainer should learn how to convey to operators: what to carry out; how to do it; and the reason why it should be carried out.

The program offers up-to-date, detailed reference material to help trainers convey the subject matter to equipment operators. Instruction manuals include detailed information about all aspects of industrial mobile equipment operator training. Included in the package are training aids which provide a visual reference to enhance the learning experience. The equipment-specific training products contain important materials for both the trainer and the operator: overhead transparencies, videos/DVD's, equipment models, safety message posters; stability pyramids and digital training aids.
