

Counterbalance Forklift Training Barrie

Counterbalance Forklift Training Barrie - Counterbalance Forklift Training courses are always in high demand. The Counterbalance forklift is a forklift that is designed together with a weight that counters the balance, equally distributing the weight of the load across the arms of the forklift. Counterbalance forklifts are made so the weight on the lift is counterbalanced by the weight behind the centre of gravity. The load is projected out from the machine's front so it is visible to the forklift driver. This particular type of forklift truck should only be used on stable, level ground or on a prepared surface.

Training is required for forklift drivers to know the proper way to spread the load evenly across the forklift arms. Trainees will know how to lower and raise the load vertically and how to tilt the forklift mast both backwards and forwards between 5 and 15 degrees. Trainees would learn the RTITB standards needed for safe forklift operation. Individuals training will also know the kinds of attachments for the forklift arms.
